

Release Engineer

Perillon Software is an emerging leader in an exciting market – enterprise software for environmental, health and safety compliance management. We are a young, fast paced start-up that is making a difference for our customers and the environment. Join a company where hard work, creativity and drive are rewarded with the opportunity to make a difference every day, take on a lot of responsibility and share in the success. If you want to apply your outstanding experience and get ready to work for an entrepreneurial company that is privately funded, growing rapidly and ready to make you the best you can be, read on and contact us.

Opportunity

Perillon is looking for a leading Release Engineer that is a highly motivated self-starter. We need a team player with a demonstrated professional history in the full lifecycle of bringing web based, enterprise class products to market. All permanent positions include competitive salary, benefits and equity. Candidates should have 5+ years relevant experience in SDLC (Software Development Life Cycle), building, testing and releasing of complex software solutions and deploying multi-tier, enterprise-level web applications and must be able to demonstrate a professional history of effectively finding and solving problems. Microsoft Certified .NET professionals preferred.

Qualifications to Excel

Undergraduate or graduate degree in computer science, or related field, preferred. Extensive experience with release engineering and deployment with Visual Studio 2005 of web-based, enterprise class, high availability web and database applications in .NET, C# and SQL environment, significant expert knowledge with software building, testing, releasing and deployment tools and environment, knowledge of Subversion is required, experience with Bugzilla (or similar Change Management System) is preferred. Understanding of software architecture and development using Visual Studio 2005, MSBuild, NUnit and SQL Server 2005 is required, experience with Finalbuilder, VBScript, ASP.NET, LogParser, NAnt, CruiseControl, WIX, MSI is a plus. Excellent communication skills are necessary. Knowledge, understanding and practical application of SDLC and industry "best practices" and standards for release engineering.

Responsibilities:

Main responsibility is to implement and maintain a repeatable, easy to use software release tools and processes integrated with testing procedures. This includes but not limited to:

- Maintain efficient release and deployment processes and integrate testing procedures
- Automate software building and scheduled software releases, develop build process from version control, through build and test, on to deployment
- Work with all parties from Project Management, Development, QA, and Documentation to manage releases
- Assist with QA and Development in handling automated test execution and reporting

- Maintain a variety of services for Engineering including custom, build related web sites, wiki services, and source code control systems
